DTIR1

TERMA
SINCE 1990

Functions and features:

Functionality

DTIR is a daily portable or wall mounted programmable controller, it allows precise adjustments in room temperature in increments of 0.5°C. The DTIR displays both the set and the room temperature and works with a number of different modes, manual, automatic, dryer and antifreeze. It can also be programmed in two temperature zones, economic and comfortable and the user has the ability, if required to calibrate the electronic temperature sensor.

Timer and Dryer

The daily timer allows you to program the device (on and off) in 15 minute intervals within a 24hr period. During these timed intervals the DTIR can work in either economic or comfort modes. The dryer function operates from 15 minutes up to 4 hours, after the timed period of drying the DTIR will return to its previously set function relevant to the time of day.

Remote control

The programmer works wirelessly with a range of Terma heating elements and controllers that are equipped with an IR receiver (ONE & KTX 4). The TTIR can control multiple heating elements in one room.

Intelligent Building Systems

The DTIR is battery powered and does not require an external power supply.

Safety

DTIR is equipped with a frost protection mode (ANTIFREEZE) to protect the radiator from the effects of freezing.

Design

DTIR is of simple and minimalist design, it is light and easy to use with a clear blue display.

Colour

DTIR is available in two colours, white and silver.

Power	Communication module	Casing ingress protection	Colour	Code
2 x LR03 (AAA)	IR	IP 30	White	TGRDBI001
2 x LR03 (AAA)	IR	IP 30	Silver	TGRDSI001
